

Supplementary Fig. S7. Granulomata at different maturation stages. (A–D) Granulomata in “A” and “B” show giant cells with positive staining of CD68 as well as individual histiocytes. Granulomata in “C” and “D” show granulomata without giant cells. Individual histiocytes are grouped or scattered along with lymphocytes. There are only a few lymphocytes and histiocytes in mature granulomata as in “D”.
